

(<https://notes.igalia.com/zMArT2YKRauOZvGeZMidig#Collective-funding-governance-and-prioritization-of-browser-engine-projects>)

Collective funding, governance and prioritization of browser engine projects

In 2023 Mozilla contributed 87.2% of all commits, Apple 78.1% and Google 95.5% to their respective projects

(<https://notes.igalia.com/zMArT2YKRauOZvGeZMidig#There-is-a-spectrum>)

There is a spectrum

one sponsor/bugs -----> collective/whole project

The further you move to the right, the more choices there are to make

How can we collectively fund, and collectively *decide*?

Sponsorship

You can now help fund the Servo project by [sponsoring us on GitHub](#) or [Open Collective](#).

Note that we will stop accepting donations [on LFX](#) soon. Any funds left over will also be transferred to the Servo project, but recurring donations will be cancelled, so if you would like to continue your recurring donation, please do so on GitHub or Open Collective.

Both one-time and monthly donations are appreciated, and over 80% of the amount will go directly towards improving Servo. The way the funds are used is decided in public via the Technical Steering Committee, but to give you a sense of scale...

- at **100 USD/month**, we can cover the costs of our website and other core infrastructure
- at **1,000 USD/month**, we can set up dedicated servers for faster Windows and macOS builds, better test coverage and reliability, and new techniques like fuzzing and performance testing
- at **10,000 USD/month**, we can sponsor a developer to make Servo their top priority

If your organization is interested in sponsoring Servo's

.

(<https://webkit.org/blog/16458/announcing-interop-2025/>)

There are impacts of how we prioritize: Things like i18n, a11y, or MathML, SVG often don't make the 'popularity' cuts.
